

2018 PROSPECTIVE CLEANPOWERSF SUPERGREEN PRODUCT CONTENT LABEL¹

SuperGreen matches 100% of your electricity usage with 100% renewable energy generation.

A percentage of SuperGreen's renewable energy content meets the minimum required of all energy providers under California's Renewable Portfolio Standard (RPS) rules. SuperGreen exceeds these requirements by including 100% State RPS-eligible renewable energy. 100% of SuperGreen's renewable electricity content is Green-E certified.

In 2018, SuperGreen will be made up of the following new renewable resources averaged annually.

Green-e Energy Eligible New² Renewables in CleanPowerSF SuperGreen in 2018

Resource Type	Voluntary Renewables	Voluntary Generation Location	Mandated Renewables	Mandated Resource Location
Wind	70.7%	California	29%	California
Solar	0.3%	California	N/A	N/A

Total Green-e Energy Certified Renewables

100%

1. These figures reflect the renewables that we have contracted to provide. Actual figures may vary according to resource availability. We will annually report to you before August 1 of next year in the form of a Historic Product Content Label the actual resource mix of the electricity you purchased.
2. New Renewables come from generation facilities that first began commercial operation within the past 15 years.

For comparison, the current average mix of resources supplying California includes: Eligible renewables (25%), Coal (4%), Nuclear (9%), Natural Gas (37%), Hydroelectric (10%), and Unspecified sources of power (15%). This resource mix is an annual estimate prepared by the California Energy Commission based on the electricity sold to California consumers during 2016.

The average residential electricity customer in the City and County of San Francisco uses 280 kWh per month.
