Bayside Collection System

The CBSIP proposes to address the following combined sewer system needs:

- Provide seismic reliability.
- Adapt to sea level rise.
- Increase conveyance and storage.
- Protect the bay.

The Bayside combined sewer collection system consists of pipes, transport boxes, pump stations, and force mains.
Central Bayside System Improvement Project: Preferred Tunnel Alignment

The Project Seeks to Improve:

• Seismic reliability and redundancy

• Water quality in the Bay during rainy season

• Stormwater management and asset life
