Drumm & Jackson Streets
Sewer Improvement Project

Our Sewer System Upgrades are Underway

The Drumm & Jackson Streets Sewer Improvements (D/J) are a part of the Sewer System Improvement Program (SSIP). The D/J project will rehabilitate approximately 805 feet of the existing Drumm Street box sewer and approximately 205 feet of the Jackson Street box sewers. The SFPUC observed severe corrosion inside the sewer boxes on this critical infrastructure.

The Drumm & Jackson sewer boxes, which are more than 6-feet wide by 7-feet high, collect and transport combined wastewater (sanitary sewage stormwater) by gravity to the North Point Pump Station before it is then sent to the Southeast Treatment Plant. The Drumm & Jackson sewers were constructed in approximately 1913.

DID YOU KNOW

The Drumm & Jackson (D/J) sewer boxes are hidden but are critical infrastructure. 25% of the City of San Francisco (area in Blue) is served by the D/J transport storage structures.

PROJECT BENEFITS:

• Rehabilitate aging sewers to prevent service disruption and increase sewer system reliability for 25% of the City
• Protect water quality and aquatic life in the Bay by helping prevent sewage overflows

Estimated Construction Schedule

MARCH–OCTOBER 2018

Construction Details

Construction is expected to last 8 months and will use a trenchless construction method. Trenchless methods are used as much as possible to reduce traffic disruption. Please refer to the map for construction details.

- **HOURS OF CONSTRUCTION** - All construction is expected to occur during the daytime between 7:00 am - 5:00 pm.
- **SEWER SERVICE** - Sewer service in the area will NOT be interrupted during construction.
- **PARKING IMPACTS** - Street parking will not be allowed near construction zones. “No-parking” signs will be posted 72 hours in advance.
- **TRANSPORTATION IMPACTS** - Streets will stay open for traffic throughout construction, with reduced traffic lanes and optional detour routes available. Delays should be expected.
- **MUNI** - No bus impacts are expected at this time.
- **NOISE IMPACTS** - Noise will be in compliance with the San Francisco Noise Ordinance. Most construction work is expected to be performed during daytime hours.
- **ODORS** - Odor control measures will be in place during construction.
- **POTHOLING WORK** - Some exploratory potholing will occur at two locations on the Embarcadero. The potholing work is estimated to last up to 7 days at each location, and may need to occur during the evening. The timing of the potholing has yet to be determined.

Project Contact Information

A 30-day and 10-day notice will be distributed prior to construction. Construction & Project Contact Information:

- Sewer emergencies, clogged catch basins (storm drains) or street flooding call: **3-1-1**
- Project questions and SFPUC General Hotline: **(415) 554-3289** or **ssip@sfwater.org**
- For more information: **sfwater.org/edjsewers**

About the Sewer System Improvement Program

The Drumm & Jackson Streets Sewer Improvements are a part of the Sewer System Improvement Program (SSIP), a 20-year, multi-billion dollar citywide investment required to upgrade our aging sewer system.

The SSIP is the result of an eight-year community planning process and will ensure a reliable, sustainable, and seismically safe sewer system now and in the future. For more information on SSIP and to stay up to date, please visit **sfwater.org/ssip.**
