Dear Neighbor,

Our focus is on the health and safety of our teams and our communities as we adapt to the rapidly changing situation. At the moment, construction continues and we want to make sure you are aware of our activities in the neighborhood as we upgrade and modernize the Southeast Treatment Plant (SEP). In addition to the information below, you can always visit sfwater.org/SEPConstruction for current construction updates.

Southeast Construction Updates
The SFPUC is focused on the health of our teams and continued delivery of our critical water, power and sewer services. Our construction crews continue to work maintaining, repairing and upgrading our essential infrastructure. We are making sure they do so as safely as possible. We ask the public to please maintain proper social distance from our crews as they work.

Southeast Treatment Plant: Biosolids Digester Facilities Project
Demolition of existing structures adjacent to the Southeast Treatment Plant is anticipated to begin this week. This work will be followed by site preparation for construction of the future biosolids digesters. These improvements will make the plant more efficient while reducing odors.

What to Expect

- Expect an increased traffic on Jerrold Avenue as construction vehicles enter and leave the project site.
- Planning for the temporary construction closure of Jerrold Avenue is
underway, with closure projected for summer 2020 pending approval by SFMTA. Advance notice will be provided extensively to the Bayview-Hunters Point community.

Southeast Community Center Construction Progress
Removal of the former buildings is complete. Construction of the new Southeast Community Center continues as crews begin foundation work on April 20th that will make the future state-of-the-art community center resilient to earthquakes.

What to Expect

- Increase in noise, vibration and movement of construction equipment at and around the project site at 1550 Evans Avenue.

Sincerely,

The Sewer System Improvement Program Communications Team
